335 East 45 Street, New York, New York 10017

The American Institute of Physics was founded in 1931 as a federation of leading societies in the field of physics. It combines into one operating agency those functions on behalf of physics which can best be done by the societies jointly. Its purpose is the advancement and diffusion of the knowledge of physics and its application to human welfare. To this end the Institute publishes scientific journals devoted wholly or mainly to physics and related sciences, provides secondary information services, and conducts research in information systems; serves the public by making available to the press and other channels of public information reliable communications of physics and its progress; carries on extensive manpower activities; maintains education projects directed toward providing information about physics education to students, physics teachers, and physics departments; encourages and assists in the documentation and study of the history of recent physics; cooperates with local, national, and international organizations devoted to physics; and fosters the relations of the science of physics to other sciences and to the arts and industries.
